

## REAR BRAKE DISC

### SUB-FRAME ASSEMBLY REMOVAL

Remove the following:

- rear wheels (page 16-5)
- exhaust system (page 3-12)
- breather hose (from the rear final gear case)
- two brake hose clamp bolts
- brake reservoir mounting bolt (keep the reservoir upright)
- two caliper mounting bolts (move the rear brake caliper aside)

*The jack height must be continually adjusted to relieve stress for ease of bolt removal.*

Place a jack or other adjustable support under the sub-frame.

Loosen the mudguard fasteners and remove the following:

- upper and lower sub-frame mounting nuts and bolts
- sub-frame assembly (disconnect the propeller shaft from the universal joint by moving it rearward)
- O-ring (from the propeller shaft)
